KALEV HANNES LEETARU, PhD │ CURRICULUM VITAE

Founder, The GDELT Project
Managing Partner, KHL Advisors
Foreign Policy Magazine Top 100 Global Thinker of 2013
Google Developer Expert, Google Cloud Platform
Former Yahoo! Fellow in Residence of International Values, Communications Technology & the Global Internet
& Adjunct Assistant Professor, Edmund A. Walsh School of Foreign Service, Georgetown University; Council
Member, Global Agenda Council on the Future of Government, World Economic Forum; Senior Fellow, Center
for Cyber & Homeland Security, George Washington University

Vision Statement: A Legacy Of Innovation

One of Foreign Policy Magazine's Top 100 Global Thinkers of 2013, Dr. Kalev Hannes Leetaru is a global advisor to governments, NGOs and the world's largest organizations, helping them solve tomorrow's greatest challenges in an ever more uncertain world. His pioneering GDELT Project fundamentally transformed modern global risk forecasting and how we think about the use of massive data, advanced analytics and AI to understand our world through massive realtime global data, becoming one of the most iconic and largest realtime open graphs over Planet Earth. For nearly thirty years his landmark studies have been at the forefront of reimagining how we understand our world through some of largest and most innovative datasets, computing platforms and technologies on the planet.

Revolutionizing the scale at which we understand society. Repurposing emotion to forecast the future. Reinventing how we use AI to "see" the world. Reimagining news as a catalog of earth. Reconceiving the future of television for NBC's SyFy as the first Twitter-driven live television show. Reenvisioning a thousand years of books as the world's most unique art gallery. Redefining academia's collective scholarly output into insights. Reappraising supercomputing as a tool for understanding society itself. Rethinking how we use data to understand tomorrow. Kalev translates the world's most advanced technologies from cloud to Generative AI into real-world applications that transform the world, building futures that "reimagine our world through data."

Transformation at these scales involving the world's largest and most complex grand challenges is as much about people and ideas as it is about technology. As a journalist, thought leader, storyteller, builder-scholar and advisor through more than 1,300 articles he has explored the interplay between information, society, technology and democracy through columns for Foreign Policy, Forbes, RealClearPolitics and others. His work has been cited in the presses of more than 100 nations, with The Economist honoring his 2011 Culturomics 2.0 doctoral study as one of the five most significant scientific discoveries of the year and Der Speigel calling him "one of the superstars of the new discipline."

With a transdisciplinary career spanning academic, commercial, journalistic, non-profit and governmental sectors worldwide, Kalev works with governments and organizations across the globe to reimagine how we use data to understand the world around us at scales and in ways never before imagined.

Career Summary: A Quarter-Century Of Reimagining Our World Through Data

Since founding his first Internet startup in 1995 while still in eighth grade (just a year after the debut of the modern web browser), Kalev's career has spanned more than a quarter-century of landmark studies reshaping fields from journalism to risk forecasting, social media to the study of society itself.

Kalev founded his first web company at the dawn of the modern web in 1995, becoming one of the early pioneers of the dot-com era while still in middle school, trading the lure of academia and an internship offer at a major research center for the commercial world of entrepreneurship. He quickly grew his company into a global startup with an international reseller network, selling it off and founding and selling a second startup before coming full circle and returning to academia as one of the first-ever high school interns at NCSA, the birthplace of Mosaic and the modern web.

As a high school intern and then undergraduate employee at NCSA he launched a number of pioneering research projects, including a transformative VR platform that was among the first to allow the creation of complete interactive worlds entirely within the VR environment and to feature a planetary-scale simulation system that allowed each created world to persist and evolve over time and, through a special external live stream of global events, reflect the real world in realtime - capabilities that were deployed in projects from a STEM program for middle school girls to undergraduate and graduate architecture students to the US Army. Limitations of VR systems at the time led to the creation of an entire end-to-end "VR operating system" to power these revolutionary capabilities.

One of his most groundbreaking efforts at NCSA was the creation of what was at the time one of the world's largest academic web-scale initiatives to build an autonomous AI reasoning system over the Internet, feeding a massive realtime global knowledge graph of world events, entities, narratives and relationships spanning the live Internet of the era into a planetary-scale AI model running on massive supercomputers that was capable of advanced reasoning over and reaction to global events and narratives in realtime - an initiative that less than a decade later led to the largest single planetary graph ever created at the time - a massive 2.4 petabyte 100-trillion-edge graph over human society running on one of the largest NSF shared memory SGI supercomputers in the US.

In all, his undergraduate research led to three issued US patents cited by more than 123 patents by some of the world's largest technology companies, as well as 50 invention disclosures, ranking him at the time of graduation in the top 120 University of Illinois researchers in issued patents and #1 in commercializable invention disclosures of all time. As a senior he was featured as the Kauffman Foundation student entrepreneur of 2005.

Kalev's doctoral research included multiple collaborations directly with SGI to leverage the engineering prototype of their massive next-generation UV2 supercomputer to create the first at-scale realtime maps of Twitter and Wikipedia, the latter of which was the first non-science application to ever unveil a new supercomputer architecture. A US Army collaboration resulted in the largest archive-scale HASS literature mining initiative encompassing the entirety of JSTOR's MEA holdings spanning the complete holdings of more than 2,000 journals over half a century, the full 60-year collective US Government holdings of DTIC and the Internet Archive's complete web archive of 1.6 billion PDFs spanning 20 years. Other initiatives included the first at-scale quantitative mining of the complete unclassified CIA and British OSINT archives, the results of which were published in the CIA's Studies in Intelligence and the first at-scale advanced mining and visualization of the State Department's declassified cable archive. He also launched and oversaw what was at the time one of the highest-volume archival microform digitization centers in academia that led to several advances in microform digitization workflows.

His doctoral dissertation represented at the time the largest academic analysis of global news content ever created, including, with permission, nearly the complete English language news holdings of LexisNexis. Another initiative included, with permission, one of the first at-scale advanced mining initiatives over the universe of available digitized public domain books, including the first maps of the geography of books through the centuries and the first-ever at-scale massively multilingual advanced archives mining platform, from geocoding, thematic and sentiment analysis to entity and relationship modeling.

His doctoral research Culturomics 2.0 was covered in the presses of more than 100 nations and was honored by The Economist as one of the five most important science discoveries of 2011, ushering in the modern era of global risk forecasting through latent and narrative indicators. At the time, it was one of the largest single graphs ever created over human society: a 2.4 petabyte graph spanning 10 billion entities connected by over 100 trillion relationships.

A decade and a half of collaborations with the Internet Archive have included the first effort to ever apply advanced mining approaches to a production web archive at scale, the first maps of the geography of television, the first at-scale mining of a major television news archive, construction of the Virtual Reading Room model, the first at-scale sentiment analysis of television, the first at-scale advanced analytic platform and first at-scale AI audiovisual analyses and annotation of a major public audiovisual archive. In collaboration with the Archive's No More 404 initiative, Kalev's GDELT Project by 2017 had provided to the Archive more than 5.4 billion URLs from its worldwide monitoring program, allowing the Archive to preserve for perpetuity more than 221TB of global voices, events and narratives from across the world, acting as one of the largest global sources for the Archive's news efforts. In 2014, with the Archive's permission, he created the first at-scale public domain book images dataset that remains among the largest ever created, extracting more than 10 million images from over 600 million digitized public domain book pages from over 1,000 libraries from around the world, reimagining the very concept of the book from text into the world's largest image gallery.

In 2014 with NBCUniversal's SyFy channel he created the sentiment analysis and audience scoring technology that powered the world's first social-media-controlled live television show: Opposite Worlds, followed by Face Off, both of which set dozens of records across the board for social engagement for a television show.

Underlying all these initiatives over the past quarter-century has been Kalev's unique ability to forge massively interdisciplinary collaborations that bring together academic, commercial and governmental partners along with funding agencies, data vendors and computing platforms to achieve the previously impossible.

As a data journalist, investigative reporter and columnist over the past decade, Kalev has translated these pioneering findings for the public, press and policymakers through more than 1,300 articles for outlets like Foreign Policy, Forbes, RealClearPolitics, The Guardian and Wired, translating their intricately complex and deeply technical concepts in a way that helps non-technical audiences understand not only the results, but their deeper implications and importance to society. As part of the release of his 2021 RealClearPolitics report on longitudinal trends in content moderation, he conducted six congressional briefings, including for the staffs of four US senators, one US representative, one state representative, two major think tanks and a follow-up Senate staff briefing to prepare their senator for a US Senate hearing. Today, as a global consultant, he routinely briefs senior decision makers, executives, governmental officials and other leaders on these topics, acting as a sounding board and senior advisor to help them discern reality from hype and look over the horizon to how the latest developments will impact their organizations and nations.

Most recently, Kalev's GDELT Project has fundamentally transformed how we think about and understand everything from global risk and the spread of ideas to what it means to be human by introducing the concept of a realtime planetary-scale multimodal graph over global society powered by the most advanced AI and cloud-scale analytic platforms in the world.

GDELT has made use of Google Cloud Platform since before GCE was publicly unveiled, continuing today as an early EAP user of many of its AI and analytic offerings. GDELT has established numerous technical milestones across a number of fields, including many firsts that have profoundly redefined our conception of the possible in how we apply AI and advanced computing to our understanding of the world around us - including pioneering the first ever web-scale mass translation initiative in 2014 to translate 100% of GDELT's monitored coverage in 65 languages representing 98.4% of its daily monitoring volume – an effort that today spans more than 100 of the 400 languages GDELT monitors. In collaboration with the Internet Archive's TV News Archive, GDELT has machine transcribed more than 2.5 million hours of airtime encompassing the Archive's complete global holdings spanning over 100 channels from 50 countries over portions of the last 24 years - marking the largest-ever academic application of large speech model (LSM) transcription to global television news content. More than a quarter million hours of video have been analyzed through SOTA video AI and LMMs and the same amount of video has been OCR'd, yielding 17.6 billion visual annotations and 14.4 billion words of recognized on-screen text. More than 50 million minutes of airtime have been machine annotated to isolate all advertisements and nearly half a million hours of transcripts have been modeled using Google's Knowledge Graph totaling more than 700M entities when combined with online news coverage. Half a billion document embeddings, 800 million still image records totaling 30TB of computer vision annotations, 1.2 billion Schema.org metadata graphs, 2.8 billion page change records, 47 billion POS and dependency annotations, 404 billion ngrams spanning 400 languages and half a trillion frontpage captures - to name just a handful of GDELT's datasets. GDELT's change graphs alone represent the largest datasets ever created to record the ephemerality of the web and front pages in the digital era.

In the AI and Generative AI eras, GDELT works closely with partners and collaborators across the world to red team, globalize, debias and understand the societal implications of these technologies as well as pioneer new scales and entirely new application domains including some of the first at-scale applications of autonomous diplomacy and crisis response whole-of-narrative intervention.

Today GDELT is one of the largest applied global open AI and data initiatives in the world, spanning video, audio, still imagery and text in more than 400 languages and directly or indirectly underpins most global risk forecasting across the world.

Over nearly 30 years, from founding his first startup in eighth grade to working across academic, commercial, journalistic, non-profit and governmental sectors across the world, Kalev's myriad groundbreaking firsts have made him one of just handful of people on earth whose work redefines the very scale of what is possible.

Education

2016   PhD, Library and Information Science, University of Illinois
2005   BS, Computer Science, University of Illinois

Professional Experience

The GDELT Project

2013-Present   **Founder**

The GDELT Project is a revolutionary planetary-scale realtime graph and observatory of global human society. Leveraging the full power of the modern cloud and the latest AI and analytic advances, GDELT transforms the planetary firehose of the digital world into a single massive realtime global graph of daily life on Planet Earth. From exabytes to insights, GDELT transforms the realtime deluge of global news coverage into actionable insights into society's most complex grand challenges. Monitoring video, audio, imagery and text spanning 400 languages over 200 years from every corner of the globe, GDELT transforms this live-chronicle of human life into a catalog of the world's events, entities, narratives, emotions, stories, dreams and fears and the infinite connections among them: what's happening, who's involved and how the world feels about it, every moment of every day, encoded as an exascale open planetary graph. From mapping global conflict and modeling global narratives to providing the data behind one of the earliest alerts of the COVID-19 pandemic, from disaster response to countering wildlife crime, epidemic early warning to food security, estimating realtime global risk to mapping the global flow of ideas and narratives, GDELT explores how we can use massive data, computing power and AI to let us see the world through the eyes of others and even forecast the future, capturing the realtime heartbeat of the planet we call home. From forecasting impending dangers to warning of the earliest glimmers of tomorrow's biggest stories, GDELT has fundamentally transformed modern global risk forecasting, becoming one of the most iconic and largest realtime open platforms for computing on the entire world.

Today GDELT not only powers directly or indirectly much of the world's risk modeling and forecasting, it has become the vanguard of the bleeding edge of reimagining how the latest AI and analytic advances can help us understand our global world in unprecedented new ways as one of the largest and most advanced applied open AI initiatives over global society. In the Generative AI era, these explorations have included one of the largest scholarly applications of Large Speech Models (LSMs) in applying Google's USM Chirp model in collaboration with the Internet Archive to transcribe more than 2.5 million hours of global television news spanning 108 channels from 50 countries and territories in at least 35 languages and dialects over nearly a quarter-century; pushing the boundaries of large-token Large Language Models (LLMs) like Gemini 1.5 Pro's 1-million-token model; advanced video explorations of Large Multimodal Models (LMMs); globalization and bias explorations of a range of Generative AI models; and collaborations with leading organizations to explore cutting edge novel approaches and future learning and reasoning architectures.

GDELT today works closely with a vast global community spanning governments, corporations, NGOs, journalists, academics and civil society groups to reimagine our future through data.

KHL Advisors

2013-Present   **Managing Partner**

Global advisory and bespoke senior-level consulting services to governments, NGOs and corporations worldwide on the most pressing issues of today and tomorrow. Advanced implementation strategy, oversight and advisory services for organizations deploying horizon-redefining use cases of AI and advanced analytics.

Typical advisory themes include classical and generative AI, digital transformation and cloud scaling and involves working with client organizations and governments on the entire transformation and adoption pipeline, from understanding how these technologies can advance governmental or organizational needs to reimagining entirely new highly innovative application areas, to crafting the overall implementation vision from the mundane to the transformational, to shepherding the realization of that vision into production-grade global deployments. Key focus on classical and generative AI, reaching beyond the hype and hyperbole to the reality of how it can and cannot be safely applied, current capabilities and horizon potential. Typical engagements include acting as a sounding board and advisor to senior and operational leadership and senior policy advisors, liaising between leadership and technical leadership and developer and SME teams to execute technical visions into operational workflows and advising on their ongoing operations and the implications of new developments and discoveries. Special emphasis on translating complex and evolving trends to decisionmakers across myriad domains, identifying strategic and tactical risks and helping executives and policymakers understand, reason about, and execute through those complex and fluid landscapes.

Kalev's nearly 30-year transdisciplinary career spans the entire landscape of AI, from building Internet-scale models to some of the largest non-commercial applications of today's leading production and experimental models ever performed to more than 1,300 articles and columns over the past decade examining the societal impact and policymaking impacts of those technologies, giving him one of the industry's most unique applied understandings of AI in the real world.

KHL Advisors stands alone as one of just a few advisory groups on earth who have personally overseen from initial vision to final execution many of the largest non-commercial deployments of foundational and research AI and GenAI models in global applications. Critically, there are few AI leaders whose work has focused so extensively on the application of AI to the real world, rather than focusing exclusively on their arcane technological underpinnings in isolation from their real-world usage. After all, one of the central tenets that distinguishes governmental and commercial adoption of AI from academic research is the need to deeply understand how it performs in the real world and how it impacts organizations, societies and the citizenry of a nation.

There is no other single AI leader today whose direct personal experience spans the largest non-commercial global deployments of so many current mass data, AI & GenAI technologies from initial vision to execution and deployment in so many contexts across such a diverse range of global inputs and domains and which has literally redefined the scale and scope of how these technologies are deployed in the real world. This one-of-a-kind experience personally overseeing and conducting the entire AI and digital transformation lifecycle, applying massive data, AI and GenAI solutions at benchmark scales across nearly every country in the world spanning 400 languages has advanced the field's understanding of how these models function in the real world on real content under real conditions in real applications at truly global scale and means KHL Advisors is uniquely able to assist organizations and governments successfully deploy these technologies in transformative new ways at unprecedented scale that fundamentally advance their organizations and societies.

Google Developer Expert for Google Cloud Platform

2015-Present   **Google Developer Expert**

Google Developer Experts are a global network of experienced product strategists, designers, developers and marketing professionals actively supporting developers, startups and companies changing the world through web and mobile applications.

RealClear Media Group

2017-Present   **Media Fellow / Contributor**

Using massive datasets to explore how data can be used to re-imagine the evolving world of journalism and shed new light on today's biggest stories. Thought leadership on the role of social media and technology in society and data-driven investigative journalism. Report on social platform transparency in 2021 resulted in six congressional briefings, including for the staffs of four US senators, one US representative, one state representative, two major think tanks and a follow-up senate staff briefing to prepare their senator for a US Senate hearing. Launched a daily

data journalism video series lasting 300 episodes that, despite its highly technical nature, garnered more than 310,000 views in its inaugural year and accounted for the top 10 search landing pages on RCP's flagship properties over the past decade.

George Washington University Center for Cyber & Homeland Security

2015-2019	**Senior Fellow**
2015-2019	**Member, Counterterrorism and Intelligence Task Force**

The GW Center for Cyber & Homeland Security is a nonpartisan "think and do" tank whose mission is to carry out policy-relevant research and analysis on homeland security, counterterrorism, and cybersecurity issues. CCHS was established in early 2015 and integrates the activities and personnel of the Homeland Security Policy Institute (HSPI) and the GW Cybersecurity Initiative.

LinkedIn

2015-2015	**Data Consultant**

Working across LinkedIn to understand how its Economic Graph can be used to understand global economic trends and to develop new kinds of international, national, regional and local geographic and industry indicators and insights into economic health and the evolution and future direction of the global economy.

Forbes Magazine

2015-2019	**Contributor**

Over the course of more than 800 articles explored the interplay between information, society, technology and democracy, touching on topics from the technological of algorithmic moderation and bias, hype versus reality of deep learning, the encryption debate and open data, to the societal of countering misinformation and filter bubbles, the changing journalistic and social media landscapes and how to create more informed societies.

Foreign Policy Magazine

2013-2015	**Featured Voice / Columnist**
2013	**Top 100 Global Thinker Of 2013**

Data-driven journalism exploring global events and narratives and thought pieces on the intersection of technology and society with an eye towards diplomacy and government.

World Economic Forum

2014-2015	**Council Member, Global Agenda Council on the Future of Government**

Exploring how technology and new innovative mindsets can reshape the functioning and role of government in the 21st century under the mission statement of how "technology can act as an enabler to transform government processes, enhancing the provision of public services and enabling higher productivity."

World Bank

2014-2015	**Consultant**

Examining how "big data" and mass open data analytics using GDELT can reshape our understanding of global human society.

United States Institute of Peace

2014–2016   **Consultant**

Integration of GDELT and global news monitoring to further our understanding of global conflict and instability.

United States Army

2012–2014   **Consultant**

Exploration of global news media and academic literature through GDELT to understand stability, local narratives, and advance global socio-cultural understanding.

NBC Universal / Syfy

2014–2014   **Sentiment Technical Adviser**

Constructed and oversaw the sentiment analysis (emotion/tone mining) systems powering two of the NBC Universal Syfy channel's flagship shows: Opposite Worlds and Face Off. Set numerous records for audience social media engagement with a television show. Technical architect of the first two shows in television history whose events were directly controlled through the course of the season by audience feedback on social media via sentiment-powered leaderboards.

Realtime leaderboard combined the intensity of conversation around each character, number of discussants and the network structure and emotion of that discussion using a sentiment engine featuring over 1.6 million words, phrases and common misspellings, a spelling correction engine, hashtag expander, grammatical modeling and even colloquial expressions, all running in realtime to power the show. Opposite Worlds set records across the board in social media engagement with a television series. The first episode was the #1 trending topic globally on Twitter and the series trended globally three times and nationally every night it was on the air. It peaked as the #1 TV series hashtag and consistently ranked among the top 5 series hashtags across broadcast and cable the entire season. Ranked the #1 program in all of broadcast/cable entertainment in tweets/unique, it had more tweets than shows like Duck Dynasty and more tweets/unique than Supernatural, Glee/American Idol, Survivor, Pretty Little Liars, American Horror Story and Wahlburgers. The technology was applied the following season to SyFy's other flagship property Face Off.

Georgetown University Edmund A. Walsh School of Foreign Service

2014–2014   **Adjunct Assistant Professor**

Teach MSFS 546 Big Data Analytics and Global Diplomacy in the Master of Science in Foreign Service (MSFS) program in the Georgetown University Edmund A. Walsh School of Foreign Service.

Georgetown University – Institute for the Study of Diplomacy in the Edmund A. Walsh School of Foreign Service

2013–2014   **Yahoo! Fellow in Residence of International Values, Communications Technology & the Global Internet**

Focusing on the application of "big data" to capture, visualize, and forecast global human society.

University of Illinois - Graduate School of Library and Information Science

2013-2013	**Irwin Fellowship**
2012-2013	**Boyd Rayward Fellowship**
2012-2013	**Josie B. Houchens Fellowship**
2012-2013	**University Fellowship**

Focusing on research in Open Source Intelligence (OSINT) and "big data" analytics around modeling and forecasting global societal unrest.

Institute for Computing in the Humanities, Arts, and Social Science (ICHASS)

2011-2012	**Assistant Director of Text & Digital Media Analytics**
2010-2012	**Senior Research Scientist for Content Analysis**
2010-2012	**Project Director, National Resource for Computational Content Analysis**
2005-2010	**Chief Technology Advisor**

Oversaw the Institute's research programs in textual and digital media "big data" analytics, including applying novel algorithms and cross-disciplinary methods to grand challenge problems in the humanities, arts, and social sciences. Founded and oversaw the National Resource for Computational Content Analysis, providing general computational content analysis capabilities to the national community.

National Center for Supercomputing Applications (NCSA)

2006-2012	**Center Affiliate**
2005-2006	**Graduate Research Assistant**
2000-2005	**Undergraduate Research Assistant**

Chief architect and technical director of the NCSA VIAS project. VIAS was an award-winning domain-specific information retrieval, archival, and processing system. It was at the forefront of a number of Fortune 50 corporate intelligence initiatives and deployed extensively in data mining and intelligence applications for corporate, academic, and governmental clients over the better part of a decade. A VIAS Dynamic Knowledge Repository (DKR) is seeded with a set of topic words, URLs, and other information that define the operational parameters of its topical area. VIAS then monitors all available mailing lists, USENET groups, available wirefeeds, and other streaming sources, as well as autonomously crawls the web using a federation of directed web crawlers to collect information on this topic. All information is screened for relevance against the topical parameter space and then undergoes a series of metadata extraction and production processes, where filters identify people, company, and organization names, bibliographic references, and acronym resolutions, together with higher-order processing such as summary abstract generation. An advanced analytics and visualization suite offers a range of features based on this generated metadata, such as temporal entity graphs and relationship mining.

Developer of ShadowLight-Mirage. ShadowLight-Mirage is a virtual reality application that allows the creation and exploration of fully immersive worlds in virtual reality. It was the basis for two projects with the US Army Corps of Engineers and was used for almost three years in a University of Illinois senior and graduate level architectural design course and in an outreach program with a local middle school. It was one of the first virtual reality application that permitted mix-modality content creation in an immersive environment, covering both structured (architectural) design and freehand (artistic) creation.

Designed and developed numerous data mining, data management and interface applications, ranging from an Office of Naval Research–funded federal grants search and discovery system, to large-scale open source intelligence initiatives. Extensive research on Optical Character Recognition (OCR), machine translation, data management, digitization, workflow, and other digital Humanities, Arts, and Social Sciences (HASS) topics. Extensive experience transferring and applying advanced computational techniques to the Humanities, Arts, and Social Sciences

disciplines. Developed and advised numerous data warehousing projects, including HIPAA compliance and large-scale medical records management.

Carbon Capture Report

2005-2012   **Project Director / Chief Architect**

Project Director and Chief Architect of the Carbon Capture Report, a free online service of the University of Illinois (https://www.carboncapturereport.org/) that monitors a daily global representative sample of climate change and energy news in the mainstream and social media and offers a variety of analytical reports including topical trending and geographic patterns. It automatically builds profiles of persons, organizations, news outlets and locations through time, and uses crowdsourcing techniques to autonomously evaluate available information sources.

Cline Center for Democracy

2006-2011   **Founding Coordinator of Information Technology & Research**

Chief technical architect of the Center's flagship Social Political Economic Event Database (SPEED) project, using newspaper and open source intelligence products to catalog societal stability events worldwide 1946-2011, codifying 1600 distinct attributes of each, and using the resulting event network for predictive analytics and scenario modeling of state stability over time.

Established and oversaw the Center's mass digitization center, one of the highest-volume bespoke microform centers in academia at the time, processing print (70,000+ pages), microfiche (50,000+ fiche totaling over 3M pages of material), and microfilm (1000+ reels totaling 2M+ pages of material). Developed workflows, pipelines, and storage architectures that supported 24/7 sustained operation at a fraction of existing best-of-breed operational cost. Collaborated on scanner modifications to support 24/7 preservation-quality operations that were ultimately integrated into the core product line of one of the most widely deployed microform scanning systems.

Coordinated closely with campus and external public and private microform repositories to construct a complete historical backfile, including overseeing shipment of entire microfiche archives from other centers for digitization. Worked closely with campus and other digitization centers across the nation to prioritize mass print digitization of governmental publications relevant to Center work. Oversaw at-scale preservation and conversion of legacy CD-ROM US Government series into modern formats. Established at-scale OCR, automated error correction and conversation infrastructure to support intelligent digitization and processing at ingest speed. Swaths of this work form the basis of several large archives of US Government publications.

Coordinated data management and research aspects of the Center's large research initiatives. Established and oversaw the core research technology infrastructure, and advised on technology direction. Architect of the Center's cyberinfrastructure and cyberenvironments that underlay its global distributed workforce.

RiverWeb Project

2005-2006   **Project Manager**

Coordinated all aspects of the RiverWeb project and led technical development. Designed and developed the digital library system that manages RiverWeb digital content and coordinated the digitization of a number of new works. Acted as project technical liaison for several local, regional, and national I-CHASS collaborations.

Gamacles Software Corporation

1995-2001   **Company Co-Founder**

Founded Gamacles Software Corporation to commercially distribute hypertext markup language authoring software. Responsible for all aspects of day-to-day operation, including technical, marketing, and business operations. Managed global sales and distributed reseller programs on multiple continents. Developed the UC HTM Web-authoring suite, the Vision dynamic Web content creator, and the Image Protect electronic copyright protection technologies.

Patents and Intellectual Property Disclosures

Undergraduate research resulted in three US patents (US7555472, US7650335, US7716352), which, along with subsequent work, have been cited by a combined 123 other issued US patents and published applications from companies including Accenture, Apple, Amazon, Business Objects, Canon, Google, Hitachi, IBM, Microsoft, Motorola, Oracle, Raytheon, Ricoh and SalesForce. More than 50 commercializable Invention Disclosures to the University of Illinois Office of Technology Management based on undergraduate and graduate research. At time of graduation was ranked in the top 120 University of Illinois researchers in number of issued US patents and #1 in total number of commercializable Invention Disclosures.

Congressional Engagement

As part of the release of the 2021 RealClearPolitics social media report, conducted six congressional briefings, including for the staffs of four US senators, one US representative, one state representative, two major think tanks and a follow-up senate staff briefing to prepare their senator for a US Senate hearing.

Academic Research Support

From 2000 to 2013 as an undergraduate, graduate student and research staff at the University of Illinois, was Principle Investigator, Co-Principle Investigator or Senior Personnel on over $10M of federal, foundation, and corporate-sponsored research from the US and EU, including US Department of Defense, US Intelligence Community, National Science Foundation, The National Academies, EU government agencies, private foundations and a wide array of Fortune 500 and Fortune 50 companies.

Teaching

2014   *MSFS 546 Big Data Analytics and Global Diplomacy.* Master of Science in Foreign Service (MSFS) program in the Georgetown University Edmund A. Walsh School of Foreign Service. Spring 2014. The course was Georgetown's first comprehensive "big data" course.

2013   *Using "Big Data" To Understand the World Around Us: Towards Realtime Modeling, Monitoring, and Forecasting Global Society.* Lipari School on Computational Social Science, Jacob T. Schwartz International School for Scientific Research. July 20-27, 2013.

Selected Presentations (*=Invited)

2023*   *Panel: All-Knowing AI: Creative Potential or Disruptive Evil?* TRT World Forum. Istanbul, Turkey. *December 9, 2023.* (INVITED).

2023*   *Opening Keynote.* MORS Emerging Techniques Forum (ETF). John Hopkins University. *December 5, 2023.* (INVITED).

2023*   *Opening Talk.* Presidency of the Republic of Türkiye Directorate of Communications STRATCOM 2023 Summit. Istanbul, Turkey. *November 24, 2023.* (INVITED).

2023*   *Fireside Chat: Disinformation Dissected: How Fake Content Spreads.* Web Summit. Lisbon, Portugal. *November 16, 2023.* (INVITED).

2023*   *Keynote: Multimodal Generative AI In The Real World.* Web Summit. Lisbon, Portugal. *November 15, 2023.* (INVITED).

2023*   *AI @ IA : Research in the Age of Artificial Intelligence: A Decade Of TV News Archive Research.* Internet Archive Annual Gala. San Francisco. *October 12, 2023.* (INVITED).

2023*   *The Promise & Perils Of AI For Journalism: Lessons Learned From A Quarter-Century Of Using AI To Catalog The Planet Through News.* MINDS Media Innovation Network Conference. Toronto, Canada. *October 5, 2023.* (INVITED).

2022*   *Opening Talk.* Presidency of the Republic of Türkiye Directorate of Communications STRATCOM 2022 summit in Istanbul, Turkey. December 2, 2022. (INVITED).

2022*   *Seeing Through Others' Eyes: Reimagining How We Experience The News.* The Future Of Text. The Linnean Society, London, England. September 27, 2022. (INVITED). (Co-convened by Vint Cerf & including speakers like Jaron Lanier)

2022*   *The Geopolitics Of Technology: Propaganda And Misinformation In The Digital Age.* Network 20/20. July 19, 2022. (INVITED).

2022*   *Humanitarian Responses To Forced Migration And Displacement.* The National Academies. June 15, 2022. (INVITED). (One in a series of presentations, including *Visualizing, Modeling And Forecasting Global Human Society Through Massive Mining*).

2022*   *Using Google Cloud & GCP AI APIs To Watch, Visualize And Forecast The World In Realtime.* Google Innovator's Hive. April 9, 2022. (INVITED).

2021*   *The Future Of AI & Analytics For Understanding Global Events & Narratives.* National Defense University. Washington, DC. November 16, 2021. (INVITED). (One in a series of presentations at NDU).

2021*   *Planetary-Scale Knowledge Graphs.* Stanford University. May 25, 2021. (INVITED). (With Dr. Shashidhar Thakur who launched the Google Knowledge Graph).

2021*   *Inaugural Guest: Google Developer's Program Between The Brackets: Cloud AI In Digital Journalism.* Google Developers Program. January 21, 2021. (INVITED).

2020*   *Exploring The Covid-19 Narrative In Global News.* Web Summit's Collision. June 23, 2020. (INVITED).

2018*   *Opening Keynote.* Special Libraries Association Arabian Gulf Chapter conference in Muscat, Oman. March 6, 2018. (INVITED).

2017*   *The GDELT Project.* Web Summit. November 8, 2017. (INVITED).

2016*   *Quantifying, Visualizing, and Forecasting Global Human Society Through "Big Data": What it Looks Like To Compute on the Entire Planet.* Foreign Ministry of Estonia. Tallinn, Estonia. December 5, 2016. (INVITED).

2016*   *Opening Keynote: Reimagining Our World At Planetary Scale: The Big Data Future Of Our Libraries.* Charleston Library Conference. Charleston, SC. November 4, 2016. (INVITED).

2016*   *Wars Of Ideas And The Emerging World of Hybrid Cyber/Information Warfare.* World Affairs 2016. San Francisco, CA. October 28, 2016. (INVITED).

2016*   *Using GDELT To Track Global Wildlife Crime.* United States Presidential Task Force on Wildlife Trafficking Symposium. National Geospatial-Intelligence Agency. Washington DC. June 28-29, 2016. (INVITED).

2016*   *How GDELT Is Cataloging And Analyzing The Entire Planet.* Structure Data. San Francisco. March 9-10, 2016. (INVITED).

2016*   *GDELT Updates 2015-2016.* US Department of Defense Strategic Multi-Layer Assessment. February 23, 2016. (INVITED). (One in a series of presentations over several years, including at Joint Base Andrews).

2016*   *GDELT Updates 2015-2016.* United States Army Special Operations Command (USASOC) Futures Forum. January 19, 2016. (INVITED). (One in a series of presentations over several years).

2015*   *Interview: Nostradamus 21ˢᵗ Century Prophecies Revealed.* History Channel. First Airing December 30, 2015. (INVITED).

2015*   *Reimagining The World Through Data.* United Nations Economic and Social Commission for Asia and the Pacific (UN ESCAP) Big Data and the 2030 Agenda for Sustainable Development: Achieving the Development Goals in the Asia and the Pacific Region. Bangkok, Thailand. December 15, 2015. (INVITED).

2015*   *Opening Keynote: Financial Solutions With Large Datasets: "Big Data" Methods, Lessons, and Challenges.* Inter-American Development Bank Annual Summit. December 10, 2015. (INVITED / OPENING KEYNOTE).

2015   *GDELT + BigQuery: Understanding global society through SQL.* O'Reilly Strata + Hadoop World. With Felipe Hoffa. December 3, 2015. Singapore.

2015*   *Keynote: Reimagining The World Through Massive Mining Of The Internet Archive.* Internet Archive Annual Library Leaders Forum 2015. Internet Archive. October 21. (INVITED / EVENING KEYNOTE). (One of a series of presentations at the Archive)

2015*   *A Discussion On Crisis Communication.* US Department of State Office of the Chief of Protocol and Digital Diplomacy Coalition. Blair House. June 18, 2015. (INVITED).

2015*   *Using Big Data To Understand Global Conflict.* Chatham House. April 24, 2015. (INVITED).

2015*   *GDELT 2.0: Understanding the Global World in Realtime Through Local Voices.* World Bank Big Data For A More Resilient Future Symposium. World Bank Headquarters. April 16, 2015. (INVITED). (One of a series of presentations at the World Bank)

2015*   *GDELT 2.0: Understanding the Global World in Realtime Through Local Voices.* US Defense Science Board Meeting. April 7, 2015. (INVITED).

2015*   *Reimagining Libraries as Conveners of Information and Innovation.* Web Archiving: Preserving the History of Data-Driven Society. National Library of Estonia. January 29, 2015. (INVITED).

2015*   *GDELT & Open Source Information for Big Data & Human Rights.* AAAS Science & Human Rights Coalition Meeting. January 15, 2015. (INVITED).

2014*   *How Big Data is Reshaping Our Understanding of the World.* Institute of International Finance. December 16, 2014. (INVITED).

2014*   *Office of the Chief Data Officer Speaker Series: How Big Data is Reshaping Our Understanding of the World.* United States Federal Reserve Board of Governors. November 6, 2014. (INVITED).

2014*   *A Global View of Protest Trends Through GDELT.* Carnegie Council and Friedrich Ebert Stiftung (FES) Conflict or Protest Conference. November 5, 2014. (INVITED).

2014*   *A Global View of Society Through GDELT and Open Information.* US Department of Defense Strategic Multi-Layer Assessment Conference: A New Information Paradigm? From Genes to 'Big Data' and Instagram to Persistent Surveillance…Implications for National Security.   Joint Base Andrews. October 29, 2014. (INVITED).

2014*   *Voices of the Next Generation: Kalev Leetaru.* Council on Foreign Relations. October 27, 2014. (INVITED).

2014*   *A Global View of Society Through GDELT and Open Information.* The United Nations. October 11, 2014. (INVITED).

2014*   *A Global View of Society Through GDELT and Open Information.* National Academy of Engineering & United States Institute of Peace PeaceTech Summit: Engineering Durable Peace.   September 20, 2014. (INVITED). (One of a series of presentations to USIP, including *Mapping, Modeling, Monitoring, Early Warning, and Forecasting of Global Conflict*)

2014*   *A Global View of Society Through GDELT and Open Information.* USAID Second Annual Frontiers in Development Conference. September 20, 2014. (INVITED). (One in a series of presentations over several years).

2014*   *Keeping Pace with Big Data.* Atlantic Media's Nextgov. (With Micheline Casey, Chief Data Officer Of The Federal Reserve). August 19, 2014. (INVITED).

2014*   *Understanding Our World Through Massive Data.* Science at the United States – Africa Leader's Summit. National Press Club. August 4, 2014. (INVITED).

2014*   *Data Journalism and Policymaking: A Changing Landscape.* The Woodrow Wilson Center. July 30, 2014. (INVITED).

2014*   *A Realtime "Big Data" View of the Entire Planet: The GDELT Project.* US Department of Defense SMA Speaker Series. May 2, 2014. (INVITED).

2014*   *Emphasizing Open Source and Analytic Tradecraft (Panel V: The Evolution of International Surveillance: Spycraft in the Modern Era).* The Georgetown Diplomacy and International Security Conference. April 11, 2014. (INVITED).

2014*   *From Provider to Partner: The Changing Role of Libraries in Data Mining.* Center for Research Libraries. February 19, 2014. (INVITED).

2013*   *The GDELT Project.* GDELT Washington DC Hackathon Hosted by Gallup. Washington, DC. December 18, 2013. (INVITED).

2013*   *The Global Conversation.* Foreign Policy Magazine's Top 100 Global Thinkers of 2013 Gala. Washington, DC. December 11, 2013. (INVITED).

2013*   *Counter-terrorism, Surveillance and Human Rights.* Annual Conference on Human Rights 2013: Human Rights and Freedom to Association. Tallinn, Estonia. December 10, 2013. (INVITED).

2013*   *Data for Diplomacy & Crises.* Digital Diplomacy Coalition + Social Good Forum. Washington, DC. October 25, 2013. (INVITED).

2013*   *Mapping the Geography of American Television News.* Internet Archive Annual Gala. San Francisco, CA. October 24, 2013. (INVITED). (Presented by Roger Macdonald).

2013*   *Gaza Goes Viral: An Analysis of Influence.* (Technical Adviser / GNIP Lead). Conflict in a Connected World. Google Ideas, Council on Foreign Relations and the Gen Next Foundation. New York City. October 20-22, 2013. (http://www.youtube.com/watch?v=unpgN2RmvbM) (INVITED).

2013*   *Understanding our World and Digital Diplomacy Through Big Data.* Canadian Foreign Ministry Innovation Week. Canadian Foreign Ministry. Ottawa, Canada. October 7, 2013. (INVITED).

2013*   Participant in *A Secure and Free Internet.* United Nations General Assembly. September 23, 2013. New York City. (INVITED).

2013*   *GDELT: Real-Time Automated Global Behavior and Beliefs Mapping, Modeling, and Forecasting Using Hundreds of Millions of Events.* 2013 National Geospatial Agency Academic Research Program (NARP) Symposium and Workshops. National Academy of Sciences Keck Center. September 10, 2013. (INVITED).

2013*   *An Open Source Perspective on Megacities.* (Participant Remarks for Human Geography Megacities Roundtable). 2013 National Geospatial Agency Academic Research Program (NARP) Symposium and Workshops. National Academy of Sciences Keck Center. September 10, 2013. (INVITED).

2013*   *Using "Big Data" To Understand the World Around Us: Towards Realtime Modeling, Monitoring, and Forecasting Global Society.* Lipari School on Computational Social Science, Jacob T. Schwartz International School for Scientific Research. Lipari, Italy. July 20-27, 2013. (INVITED).

2013*   *How Can Forecasting of Risks of Mass Atrocities be Improved – Big Data Approaches.* Workshop on Early Warning about Mass Atrocities Against Civilians, US Agency for International Development (USAID). July 11, 2013. (INVITED).

2013*   *Pioneers in Mining Electronic News for Research.* Center for Research Libraries (CRL), Newberry Library. June 27, 2013. (http://www.crl.edu/focus/article/9556) (OPENING KEYNOTE / INVITED). (One in a series of presentations to CRL).

2013*   *GDELT.* DARPA Information Science and Technology (ISAT) Economic Science Workshop. Defense Advanced Research Projects Agency (DARPA). June 17, 2013. (INVITED).

2013*   *Mapping, Modeling, Monitoring, Early Warning, and Forecasting of Global Conflict.* Stanford University / US Institute of Peace: Blogs & Bullets Workshop on Syria. Stanford University. April 17, 2013. (INVITED).

2013   *GDELT: Global Data on Events, Language, and Tone, 1979-2012.* International Studies Association Annual Conference. April 3, 2013.

2012*   *Using "Big Data" To Understand the World Around Us: Towards Realtime Modeling, Monitoring, and Forecasting Global Society.* Council on Foreign Relations Center for Preventive Action Workshop on Social Media and Conflict Prevention. Washington, DC, December 12, 2012. (INVITED).

2012*   *Using "Big Data" To Understand the World Around Us: Towards Realtime Modeling, Monitoring, and Forecasting Global Society.* United Kingdom Science & Technology Facilities Council (STFC) Unleash the Power of Big Data Conference: Daresbury, United Kingdom, December 4, 2012. (INVITED).

2012*   *The Big Data Future.* SGI Innovators Breakfast: November 14, 2012, Salt Lake City, UT. (INVITED).

2012*   *The Global Twitter Heartbeat.* SGI Theater at Supercomputing 2012: November 12-14, 2012, Salt Lake City, UT. (INVITED).

2012   *National Academies Keck Futures Initiative – The Informed Brain in a Digital World.* (Discussant). National Academies Keck Futures Initiative 2012. Beckman Institute: Irvine, CA, November 14-17, 2012.

2012*   *Realtime Automated Monitoring of Global Information Streams for Crisis Situational Awareness, Early Warning, and Forecasting.* International Crisis Mapping Conference (ICCM2012). World Bank: Washington, DC, October 11-14, 2012. (Also: *Mapping For Realtime Automated Global Crisis Mapping and Subnational Global Risk Forecasting)* (Also spoke at the Inaugural ICCM in 2009).

2012*   *TEDx: Culturomics 2.0: Forecasting The Future Through Global Media.* TEDxTallinn 2012. Tallinn, Estonia: May 4, 2012. (INVITED / TEDx).

2012*   *Keynote Address: A Decade and a Half of Archiving the Web for Data Mining: Lessons Learned and How Users Use Web Archives.* International Internet Preservation Consortium 2012 General Assembly. Library of Congress, Washington, DC: April 30 – May 4, 2012. (INVITED / KEYNOTE). (An expanded version of this talk appeared as a three-day invited guest blog post on the Library of Congress Digital Preservation blog and as an IIPC Report). (One in a series of presentations at the Library of Congress).

2011*   *Culturomics 2.0: Forecasting The Future Through Global Media.* (November 9, 2011). IAB Poland (Internet Poland Conference & Expo). Warsaw, Poland. November 8-9, 2011 (INVITED).

2011*   *Culturomics 2.0: Petascale Humanities Computing.* (October 25, 2011). National Endowment for the Humanities (NEH). (INVITED).

2010*   *Global News Analysis: Understanding our World Through News.* Library of Congress. Washington, DC. November 3, 2010. (INVITED)

2010*   *Citizen Journalism and Community News.* Library of Congress. Washington, DC. (2010). (INVITED).

2009*   *Community Engagement Guidelines for Carbon Capture and Sequestration.* World Resources Institute. Washington, DC. (2009). (INVITED).

2009* *Automated Event Mining: Approaches and Practices.* First International Crisis Mapping Conference (ICCM2009). John Carrol University: Cleveland, Ohio, October 16-18, 2009. (INVITED).

2009* *Invited Participant/Discussant.* Soul of the New Machine: Human Rights, Technology & New Media. UC Berkeley, May 4-5, 2009. (INVITED)

2006* *Data Mining and Interface for the Digital Humanities,* Apple Executive Briefing, Apple Computer, Cupertino, CA, May 17, 2006.

2005* *Empowering the Entrepreneur: Bringing the Power of Information Technology and the Web to the Entrepreneur,* with Alan Craig, Ewing Marion Kauffman Foundation, Kansas City, Missouri, May 10, 2005. (INVITED) (Kauffman Student Entrepreneur)

2004* *VIAS: Data Mining the Entire Web.* Leetaru, Kalev. (2004). US-Australia Collaboration Workshop on High-Performance Grids and Applications. Swiss Grand Hotel, Bondi Beach, Sydney, Australia. June 8-9, 2004. (INVITED) (US-Australia summit on building out Australia's national supercomputing infrastructure)
